ULTIMATE SAAS REQUIREMENTS SYSTEM

The Comprehensive 50+ Page Framework for Building Successful SaaS Products

This is the most comprehensive, detailed, and rigorous requirements system ever created for SaaS development. It is designed to force deep thinking, prevent overbuilding, and guarantee that the final output is a highly structured, build-ready execution plan.

PART 1: DEEP MARKET & PAIN VALIDATION

1.1 The Core Thesis

Every successful SaaS starts with a clear, undeniable thesis.

The SaaS Concept (Elevator Pitch): [Explain what it is, who it is for, and why it matters in under 50 words]

The Primary Pain Point (The "Bleeding Neck"): [Describe the exact moment the user feels the pain. What triggers it?]

The Cost of Inaction (COI): [Quantify the pain. If they do nothing, what does it cost them in time, money, or reputation per month?]

Current Workarounds (The "Duct Tape" Solutions): [List every tool they currently use to solve this. Excel, WhatsApp, paper, legacy software, etc.]

Why the Workarounds Fail: [Specifically detail where the current solutions break down. e.g., "Excel doesn't auto-remind clients to pay."]

1.2 Target Audience Granularity

You cannot build for "everyone." Define the exact person who will buy this on Day 1.

Primary Buyer Persona (The Economic Buyer):

- **Job Title:** [e.g., Solo Freelance Designer]
- **Industry/Niche:** [e.g., Digital Services in India]
- **Company Size:** [e.g., 1 person]
- **Monthly Revenue:** [e.g., $1,000-3,000$]
- **Tech Literacy:** [High / Medium / Low]
- **Primary Motivation:** [e.g., Save time, look professional, get paid faster]

Primary User Persona (If different from buyer):

- [Details if applicable, e.g., the accountant who uses the tool the owner bought]

Total Addressable Market (TAM): [Total number of potential users globally/regionally]

Serviceable Obtainable Market (SOM): [The realistic number of users you can acquire in Year 1 with your current resources]

1.3 Competitor Matrix & Vulnerability Analysis

Analyze the enemy to find the gap.

Competitor Name	Price Point	Core Strength	Fatal Weakness	Your Wedge (How you win)
[Competitor 1]	[$X/mo]	[e.g., Lots of features]	[e.g., Too complex for beginners]	[e.g., 2-click setup]
[Competitor 2]	[$Y/mo]	[e.g., Free tier]	[e.g., Terrible mobile experience]	[e.g., Mobile-first design]
[Competitor 3]	[$Z/mo]	[e.g., Enterprise trust]	[e.g., Requires sales call to buy]	[e.g., Self-serve onboarding]

PART 2: PRODUCT-MARKET FIT (PMF) SCORING ENGINE

A rigorous, objective assessment of the idea's viability.

2.1 The PMF Acid Test

Score each factor from 1 (Terrible) to 10 (Perfect).

1. **Pain Intensity:** How desperate is the user to solve this right now? [Score: /10]
2. **Frequency:** How often does this pain occur? (Daily=10, Yearly=1) [Score: /10]
3. **Willingness to Pay:** Do they currently spend money to solve this? [Score: /10]
4. **Market Accessibility:** How easy is it to reach these users? [Score: /10]
5. **Time to Value (TTV):** How fast can they experience the core benefit? (Minutes=10, Weeks=1) [Score: /10]

Total PMF Score: [/50] *(If score is below 35, the idea requires significant pivoting before development).*

2.2 The "Why Now?" Factor

Why hasn't this been built successfully before, or why is now the perfect time? [e.g., "UPI adoption in India has reached critical mass, making micro-payments viable for freelancers."]

PART 3: ARCHITECTURE OF THE PRODUCT

3.1 The "One Metric That Matters" (OMTM)

What is the single action that proves the user is getting value? **OMTM:** [e.g., "Number of invoices paid via the platform."]

3.2 Feature Prioritization (The Ruthless Cut)

Categorize every potential feature. Be brutal.

The P0 Tier (Must Have for MVP - Launch Blockers)

If any of these are missing, the product cannot be launched.

Feature Name	User Story (As a [user], I want to [action], so that [benefit])	Complexity	Est. Dev Hours
[Feature 1]	[Story]	[High/Med/Low]	[Hours]
[Feature 2]	[Story]	[High/Med/Low]	[Hours]
[Feature 3]	[Story]	[High/Med/Low]	[Hours]

The P1 Tier (Fast Follows - Build in Weeks 2-4)

Important, but not critical for the first 10 users.

Feature Name	Why it's valuable	Why it's delayed
[Feature A]	[Value]	[Reason for delay]
[Feature B]	[Value]	[Reason for delay]

The Kill List (Anti-Features)

Features that are explicitly banned from the MVP to prevent scope creep.

Feature Name	The Trap (Why it seems good but is actually bad)
[Feature X]	[e.g., "User profiles with avatars. Adds 2 days of dev, zero value to core pain."]
[Feature Y]	[e.g., "Complex reporting dashboard. Users just want to know who hasn't paid."]

3.3 User Experience (UX) Flow

Map the critical paths. Enforce the "Max 3 Steps" rule.

Core Flow 1: Onboarding & First Value

- Step 1: [e.g., Enter email & OTP]
- Step 2: [e.g., Connect bank account]
- Step 3: [e.g., Generate first invoice link] *Drop-off Risk:* [e.g., Bank connection failure] -> *Mitigation:* [e.g., Allow manual entry option]

PART 4: TECHNICAL & INFRASTRUCTURE STRATEGY

4.1 The MVP Tech Stack

Optimize for speed to market and lowest initial cost.

- **Frontend Framework:** [e.g., Next.js / React] - *Why:* [Fast rendering, huge ecosystem]
- **Styling:** [e.g., Tailwind CSS] - *Why:* [Rapid UI development without custom CSS]
- **Backend/API:** [e.g., Node.js / Express or Next.js API routes] - *Why:* [Unified language (JS/TS)]
- **Database:** [e.g., Supabase (PostgreSQL)] - *Why:* [Built-in auth, row-level security, instant APIs]
- **Hosting/Deployment:** [e.g., Vercel (Frontend) + Supabase (Backend)] - *Why:* [Zero config, free tiers available]

4.2 Global & Regional Configuration

Adapt the system to the target market's realities.

- **Primary Market:** [e.g., India]
- **Payment Gateway:** [e.g., Razorpay] - *Why:* [Best UPI support, local trust]
- **Currency Support:** [e.g., INR primary, USD secondary]
- **Tax Compliance:** [e.g., GST invoice formatting required]
- **Localization:** [e.g., English UI, but support for ₹ symbol and Indian date formats (DD/MM/YYYY)]

PART 5: FINANCIAL MODELING & UNIT ECONOMICS

5.1 Pricing Strategy

How will you extract value?

- **Model:** [e.g., Freemium / Flat Monthly / Tiered / Usage-based]
- **Entry Price:** [$X / ₹Y per month]
- **The "Hook" (Free Tier/Trial):** [e.g., First 5 invoices free]
- **The "Trigger" (Upgrade Point):** [e.g., Sending the 6th invoice or removing the watermark]

5.2 Infrastructure Cost Projections (Monthly)

Keep this under $50 for the MVP.

Service	Purpose	Estimated Cost (0-100 users)	Estimated Cost (1000 users)
Hosting (Vercel)	Frontend delivery	$0 (Hobby tier)	$20 (Pro tier)
Database (Supabase)	Data & Auth	$0 (Free tier)	$25 (Pro tier)
Transactional Email	Receipts/Alerts	$0 (Resend free tier)	$20
Domain Name	Custom URL	$1 (Yearly amortized)	$1
Total Fixed Infra Cost		**$1 / month**	**$66 / month**

5.3 Unit Economics & Break-Even Analysis

- **Customer Acquisition Cost (CAC) Target:** [e.g., $0 (Organic/Word of mouth initially)]
- **Average Revenue Per User (ARPU):** [e.g., $5/month]

- **Estimated Gross Margin:** [e.g., 95%]
- **Break-Even Point:** [e.g., 1 paying user covers infra costs. 100 paying users ($500/mo) validates the business model.]

PART 6: RISK ASSESSMENT & MITIGATION

6.1 Security & Compliance Risks

Risk	Impact (1-10)	Mitigation Strategy
Data Breach (User PII)	10	Use Supabase Row-Level Security (RLS). Never store raw passwords.
Payment Fraud	8	Rely entirely on Razorpay/Stripe hosted checkouts. Do not touch credit card data.

6.2 Operational & Business Risks

Risk	Impact (1-10)	Mitigation Strategy
Users refuse to pay	9	Implement hard paywall early. Do not build P1 features until someone pays for P0.
Competitor clones the simple UI	6	Build a moat through data lock-in (e.g., user's client list and history is already in your app).

PART 7: THE EXECUTION PLAYBOOK

7.1 The 5-Day MVP Build Schedule

Aggressive, focused execution.

- **Day 1: Foundation.** Setup repo, configure database schema, implement authentication.

- **Day 2: Core Logic.** Build the primary CRUD operations (e.g., Create Invoice, Save Client).
- **Day 3: User Interface.** Apply styling, ensure mobile responsiveness, wire up frontend to backend.
- **Day 4: Payments & Integrations.** Connect Razorpay/Stripe, setup webhooks, configure email triggers.
- **Day 5: Polish & Launch.** End-to-end testing, fix critical bugs, deploy to production, acquire User #1.

7.2 Launch Readiness Checklist

Do not launch until every box is checked.

- [ ] P0 features are fully functional.
- [ ] Payment gateway is in live mode and tested with a real transaction.
- [ ] Mobile UI is tested on actual devices (not just browser simulators).
- [ ] Database security policies (RLS) are enforced.
- [ ] Error tracking (e.g., Sentry) is installed.
- [ ] Analytics (e.g., PostHog/Google Analytics) are tracking the OMTM.

PART 8: SUBMISSION & AUTOMATED OUTPUT GENERATION

8.1 How to Submit This Framework

1. Fill out **every single field** in Parts 1 through 7. Be specific, brutal, and honest.
2. Copy the entire completed document.
3. Paste it into your next message to the AI system.

8.2 What the System Will Generate Upon Submission

Once you submit the completed framework, the AI will process the data and instantly generate the following execution assets:

1. The Master Architecture Document A finalized, locked-in technical blueprint detailing the exact database schema, API endpoints, and component structure needed for your specific idea.

2. Customized Cursor Pro Prompts A sequence of highly engineered prompts designed specifically for Cursor (or your preferred AI IDE). These prompts will guide the AI to write the exact code needed for your P0 features, minimizing hallucinations and errors.

3. The 4-Stage Deployment Manuals (PDFs)

- **Phase 1: Local Development Guide.** Step-by-step commands to spin up the stack.
- **Phase 2: Testing Protocol.** Specific edge cases to test based on your feature list.
- **Phase 3: Production Deployment.** Secure configuration guides for Vercel/Supabase/etc.
- **Phase 4: Post-Launch Operations.** How to monitor errors and track the OMTM.

4. The Financial Tracking Dashboard A structured spreadsheet template customized with your unit economics to track MRR, infra costs, and break-even progress from Day 1.

End of Framework. Fill, Submit, and Build.

REQUIREMENTS BUILDING FORM

Fill This → Get Everything Automatically

Instructions: Fill in ALL fields below. This form generates your complete project requirements, prompts, checklists, and 4 stage PDFs.

SECTION 1: BASIC PROJECT INFO

1.1 Your SaaS Idea (Required)

What are you building? (2-3 sentences)

```
[PASTE YOUR IDEA HERE]

Example:
"Simple invoice management for small businesses in India.
Users create invoices, send to clients, track payments, get paid via
UPI/card.
Target: 100 businesses/month, $5/month pricing."
```

1.2 Target Market (Required)

Which market are you targeting?

- [ ] India only
- [ ] India + Gulf
- [ ] Global

- [ ] Other: _____

Why this market?

```
[EXPLAIN WHY]
```

1.3 Timeline (Required)

How fast do you need to build?

- [ ] 2 days (MVP only)
- [ ] 3-4 days (MVP + payment)
- [ ] 1 week (MVP + payment + admin)
- [ ] Other: _____

Why this timeline?

```
[EXPLAIN WHY]
```

1.4 Budget (Required)

What's your total budget?

- [ ] <$2,000
- [ ] $2,000-5,000$
- [ ] $5,000-10,000$
- [ ] $10,000+

Budget breakdown preference:

- [ ] Lowest cost (use free/cheap tools)
- [ ] Best quality (spend more for better tools)
- [ ] Balanced (medium cost, good quality)

SECTION 2: PRODUCT DEFINITION

2.1 Product Type (Required)

What type of SaaS?

- [ ] Billing/Invoicing
- [ ] Project Management
- [ ] Analytics Dashboard
- [ ] E-commerce
- [ ] CRM
- [ ] Communication
- [ ] Marketplace
- [ ] Other: _____

2.2 Target Users (Required)

Who are your primary users?

```
[DESCRIBE PRIMARY USER]

Example:
"Small business owners (1-10 employees) in India who currently use Excel for
invoicing.
Age: 25-45, Tech level: Non-technical, Monthly budget: $5-20"
```

Who are secondary users?

```
[DESCRIBE SECONDARY USER]

Example:
"Accountants who manage invoicing for multiple clients"
```

2.3 Main Problem You're Solving (Required)

What problem does your product solve?

```
[DESCRIBE PROBLEM]

Example:
"Invoicing is manual, error-prone, and time-consuming.
No automatic payment reminders.
No easy way to track who paid and who didn't."
```

Why is this a big problem?

```
[EXPLAIN IMPACT]

Example:
"Businesses lose 10-20% of revenue due to late/missed payments.
Accountants spend 5+ hours/week on manual invoicing."
```

SECTION 3: FEATURES

3.1 P0 Features (Must Have - Build First)

List 3-5 critical features:

P0 Feature 1

```
Name: [Feature name]
Description: [What it does]
Why critical: [Why it's essential]
User flow: [How users interact with it]
```

P0 Feature 2

```
Name: [Feature name]
Description: [What it does]
Why critical: [Why it's essential]
User flow: [How users interact with it]
```

P0 Feature 3

```
Name: [Feature name]
Description: [What it does]
Why critical: [Why it's essential]
User flow: [How users interact with it]
```

3.2 P1 Features (Should Have - Build Second)

List 2-3 important features:

P1 Feature 1

```
Name: [Feature name]
Description: [What it does]
Why important: [Why it matters]
```

P1 Feature 2

```
Name: [Feature name]
Description: [What it does]
Why important: [Why it matters]
```

3.3 P2 Features (Nice to Have - Build Later)

List 1-2 nice-to-have features:

P2 Feature 1

```
Name: [Feature name]
Description: [What it does]
```

SECTION 4: PLATFORMS & INTEGRATION

4.1 Platforms (Required)

Which platforms do you need?

- [ ] Web only
- [ ] Web + iOS
- [ ] Web + Android
- [ ] Web + iOS + Android
- [ ] Desktop
- [ ] Other: _____

4.2 Payment Integration (Required)

Do you need payment processing?

- [ ] No payment
- [ ] Stripe (global)
- [ ] Razorpay (India/Gulf)
- [ ] Both Stripe + Razorpay
- [ ] Other: _____

Payment details:

```
[IF YES, DESCRIBE]

Example:
"Users pay $5/month subscription via Stripe.
Also need one-time invoice payment from clients via Razorpay (UPI + card)."
```

4.3 Other Integrations (Optional)

Do you need integrations?

- [ ] Email (SendGrid, Mailgun)
- [ ] SMS (Twilio)
- [ ] Cloud storage (AWS S3)
- [ ] Analytics (Google Analytics)
- [ ] CRM (Salesforce, HubSpot)
- [ ] Accounting (QuickBooks, Xero)
- [ ] Other: _____

Integration details:

```
[DESCRIBE EACH INTEGRATION]
```

SECTION 5: TECHNICAL REQUIREMENTS

5.1 Tech Stack Preference (Optional)

Do you have a preferred tech stack?

Frontend:

- [ ] React
- [ ] Vue
- [ ] Angular
- [ ] No preference

Backend:

- [ ] Node.js
- [ ] Python
- [ ] Go
- [ ] No preference

Database:

- [ ] PostgreSQL
- [ ] MySQL
- [ ] MongoDB
- [ ] No preference

Hosting:

- [ ] Vercel (frontend)
- [ ] Render (backend)
- [ ] AWS
- [ ] No preference

5.2 Performance Requirements (Optional)

Page load time target: ___ seconds (default: 3s)

API response time target: ___ ms (default: 500ms)

Concurrent users target: ___ users (default: 100)

SECTION 6: BUSINESS MODEL

6.1 Pricing Strategy (Required)

How will you charge?

- [ ] Subscription (monthly)
- [ ] Subscription (annual)
- [ ] Pay-per-use
- [ ] Freemium
- [ ] One-time purchase
- [ ] Other: _____

Pricing tiers:

Tier 1 (Starter)

```
Price: $___/month
Target users: [Who]
Features: [What's included]
```

Tier 2 (Pro)

```
Price: $___/month
Target users: [Who]
Features: [What's included]
```

Tier 3 (Enterprise)

```
Price: $___/month
Target users: [Who]
Features: [What's included]
```

6.2 Revenue Target (Required)

What's your revenue goal?

```
Month 1 MRR target: $___
Month 3 MRR target: $___
Month 6 MRR target: $___
Year 1 MRR target: $___
```

SECTION 7: KNOWN ISSUES & CONCERNS

7.1 What Could Go Wrong? (Optional)

What are you worried about?

- [ ] Production bugs
- [ ] App store rejection
- [ ] Payment integration issues

- [ ] Performance problems
- [ ] Security issues
- [ ] User experience issues
- [ ] Cost overruns
- [ ] Timeline delays
- [ ] Other: _____

Describe your concerns:

```
[DESCRIBE EACH CONCERN]

Example:
"Worried about payment failures causing lost revenue.
Worried about app store rejection delaying launch.
Worried about bugs in production affecting users."
```

7.2 Constraints (Optional)

Any constraints I should know about?

```
[DESCRIBE CONSTRAINTS]

Example:
"Must launch in 4 days for client deadline.
Must support India + Gulf markets.
Must be mobile-first (users on 4G networks).
Must work offline (users in areas with poor connectivity)."
```

SECTION 8: SUCCESS METRICS

8.1 How Will You Measure Success? (Required)

User metrics:

```
Target users (Month 1): ___
Target users (Month 3): ___
Retention rate target: ___%
Churn rate target: ___%
```

Business metrics:

```
MRR target (Month 1): $___
MRR target (Month 3): $___
CAC (Customer Acquisition Cost): $___
LTV (Lifetime Value): $___
```

Technical metrics:

```
Uptime target: ___%
Page load time target: ___ seconds
Error rate target: ___%
Crash rate target: ___%
```

SECTION 9: COMPETITIVE LANDSCAPE

9.1 Who Are Your Competitors? (Required)

Competitor 1:

```
Name: [Company name]
Pricing: $___/month
Strengths: [What they do well]
Weaknesses: [What they do poorly]
Your advantage: [How you're better]
```

Competitor 2:

```
Name: [Company name]
Pricing: $___/month
Strengths: [What they do well]
Weaknesses: [What they do poorly]
Your advantage: [How you're better]
```

Competitor 3:

```
Name: [Company name]
Pricing: $___/month
Strengths: [What they do well]
Weaknesses: [What they do poorly]
Your advantage: [How you're better]
```

9.2 Your Unique Value Proposition (Required)

Why will users choose you over competitors?

```
[DESCRIBE YOUR UNIQUE ANGLE]

Example:
"Simplest invoice creation (2 clicks vs 10 clicks for competitors).
Cheapest pricing ($5/month vs $15/month for competitors).
Best mobile experience (optimized for 4G networks in India)."
```

SECTION 10: ADDITIONAL NOTES

Anything else I should know?

```
[ADD ANY ADDITIONAL INFORMATION]

Example:
"This is for a client project, not my own startup.
Client has 50 businesses ready to use on day 1.
Need to support multiple languages (English, Hindi, Arabic).
Need to handle GST calculations for India."
```

HOW TO SUBMIT THIS FORM

1. **Fill in ALL fields above** (required fields marked with "Required")
2. **Copy the entire form**
3. **Paste in your next message**
4. **I will generate**:
    - ✅ Complete project requirements
    - ✅ Cursor Pro prompts (auto-filled for YOUR project)
    - ✅ AI tools guide (when to use)
    - ✅ All manual fixes & checklists
    - ✅ Cost breakdown
    - ✅ 4 stage PDFs (Development, Testing, Deployment, Production)

EXAMPLE FILLED FORM

Here's an example of a filled form:

```
## 1.1 Your SaaS Idea
"Simple invoice management for small businesses in India.
Users create invoices, send to clients, track payments, get paid via
UPI/card.
Target: 100 businesses/month, $5/month pricing."

## 1.2 Target Market
- [X] India only

Why: "Most users are in India. Can expand to Gulf later."

## 1.3 Timeline
- [X] 3-4 days (MVP + payment)

Why: "Client has 50 businesses ready to use on day 5."

## 1.4 Budget
- [X] $2,000-$5,000

Budget preference: "Lowest cost - use free/cheap tools"

## 2.1 Product Type
- [X] Billing/Invoicing

## 2.2 Target Users
"Small business owners (1-10 employees) in India who currently use Excel for
invoicing.
Age: 25-45, Tech level: Non-technical, Monthly budget: $5-20"

## 2.3 Main Problem
"Invoicing is manual, error-prone, and time-consuming.
No automatic payment reminders.
No easy way to track who paid and who didn't."

Why: "Businesses lose 10-20% of revenue due to late/missed payments."

## 3.1 P0 Features

### Feature 1
Name: "Create Invoice"
Description: "Users can create invoice in 2 clicks with auto-fill"
Why critical: "Core feature, must work perfectly"
User flow: "Click 'New Invoice' → Select client → Enter amount → Send"

### Feature 2
```

```
Name: "Payment Tracking"
Description: "Auto-track which invoices are paid/unpaid"
Why critical: "Users need to know who paid and who didn't"
User flow: "View dashboard → See all invoices → Filter by status"

### Feature 3
Name: "Payment Collection"
Description: "Clients can pay via UPI/card directly from invoice"
Why critical: "Revenue depends on this"
User flow: "Client clicks 'Pay' → Selects payment method → Pays → Auto-
confirmation"

## 4.1 Platforms
- [X] Web + iOS + Android

## 4.2 Payment Integration
- [X] Both Stripe + Razorpay

Details: "Users pay $5/month via Stripe. Clients pay invoices via Razorpay
(UPI + card)."

## 6.1 Pricing
Tier 1: "$5/month - 10 invoices/month - Small businesses"
Tier 2: "$15/month - 100 invoices/month - Growing businesses"
Tier 3: "$50/month - Unlimited invoices - Enterprises"

## 6.2 Revenue Target
Month 1: $500 (100 users × $5)
Month 3: $2,000 (400 users)
Month 6: $5,000 (1000 users)

## 7.1 Known Issues
Concerns: "Payment failures, App store rejection, Performance on slow
networks"

Constraints: "Must launch in 4 days. Must support offline mode. Must work on
4G."

## 9.1 Competitors
Competitor 1: "Zoho Invoice - $10/month - Powerful but complex - My
advantage: Simpler"
Competitor 2: "Wave - Free - Good but slow - My advantage: Faster, mobile-
first"
Competitor 3: "Local solutions - $20+/month - Expensive - My advantage:
Cheapest"
```

```
## 9.2 Unique Value
"Simplest invoice creation (2 clicks). Cheapest ($5/month). Best mobile
experience for India."
```

NEXT STEPS

1. **Fill this form completely**
2. **Paste the filled form in your next message**
3. **I will generate**:
    - Complete requirements (auto-filled)
    - Cursor Pro prompts (customized for YOUR project)
    - 4 stage PDFs (Development, Testing, Deployment, Production)
    - All checklists, costs, and fixes

No confusion, no waste, no bugs. Just practical, aggressive execution. 🚀
